                                                                                                             SUBUNIT: Multimeric.

-: SUBUNIT: Multimeric.
-: SUBCELJULAR LOCATION: Secreted.
-: SUBCELJULAR LOCATION: Secreted.
-: SUBCELJULAR LOCATION: Secreted.
-: TISSUE SPECIFICITY: Colon, small intestine, colonic tumors, bronchus, cervix and gall bladder.
-: PTM: All cysteine residues are involved in intrachain or interchain disulfide bonds (By similarity).
-: POLYMORPHISM: The number of repeats is highly polymorphic and varies among different alleles.
-: SIMILARITY: Contains 1 Cterminal cystine knot-like (CTCK) domain.
-: SIMILARITY: Contains 2 VWFC domains.
       J. Clin. Invest. 88:1005-101311991).
-!-FUNCTION: Coats the epithelia of the intestines, airways, and other mucus membrane-containing organs. Thought to provide a protective, lubricating barrier against particles and infectious agents at mucosal surfaces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPROXIMATE REPEATS

mucin 1 precursor, repetitive splice form A [validated] - human
N.Alternate names: breast carcinoma-associated DF3 antigen; core protein KP39; episialin
ncreatic mucin; polymorphic epithelial mucin (PEM)
N.Contains: mucin 1 precursor, epithelial tumor antigen splice form; mucin 1 precursor,
C.Species: Homo sapiens (man)
C.Date: 20-Apr-2000 #sequence revision 20-Apr-2000 #text change 02-Jun-2000
C.Accession: A35175; B35175; A35886; A35887; S10572; S40293; A36735; PX0066; S10218; SS1
N.Ligtenberg, M.J.L.; Vos, H.L.; Gennissen, A.M.C.; Hilkens, J.
D. Biol. Chem. 265, 5573-5578, 1990

The sequence given is a full length translation from the megakaryocyte stimulating factor (MSF) precursor. The sequence covered by exons II, III and III encodes megakaryocyte stimulating factor (MSF). This sequence is codified by the addition of an N-terminal sequence encoding a secretory leader, an initiating methionine proceeding exon II and a terminating codon following exon IV. The cDNA sequence given contains sequencess codon following exon IV. The cDNA sequence given contains the initiating methionine, and encodes a classical manualian protein secretion signal sequence. The sequence encoding the crision is protein secretion signal sequence. The sequence encoding the crision between amino acid residues 134 - 147. The primary transcript of this gene may be cleaved in different ways to yield a family of mRNA's cach encoding a different septement. Exons V and VI are thought to be cach encoding a different wist protein. Exons V and VI are thought to be stability, folding and processing of the molecule. These exons are also thought to play a role in the observed spnergy of MSF with other cytokines. Exons V - XII are believed to be implicated in the processing or folding of the appropriate structure of the resulting factor, ie. one corn more of these exons may contain sequences which direct proteolytic matrix processing. Both naturally occuring and non-naturally occuring matrix processing. Both naturally occuring and non-naturally occuring spliced exons from this sequence, with the exons spliced together in differing orders to form different members of the MSF family. (Updated on differing orders to form different members of the MSF family. (Updated on the correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a human tribonectin which is a product of alternative splicing of the human MSF (megakaryocyte stimulating factor) gene. The tribonectin has at least one O-linked oligosaccharide lubricating moiety and has a polypeptide sequence comprising 1-76 repeats of a motif having at least 50% identity to the sequence KERPAPT (AAR2974). The invention also relates to a nucleic acid encoding a human KSF-derived tribonectin; a biocompatible composition comprising a human tribonectin for inhibiting tissue adhesion formation; and a method of masuring the amount of MSF compared to osteoarthritis by mammal, wherein an increased amount of MSF compared to a control confidence the presence of or predisposition to developing osteoarthritis. The tribonectin and DNA encoding it are useful in the treatment of costeoarthritis, where they may be used for lubricating mammalian joints, when formulated as a membrane, foam, gel or fibre, is useful for such as articulating joints of humans, dogs or horses. The tribonectin, where the injury is caused by a surgical insertion or trauma, or mammal, where the injury is caused by a surgical insertion or trauma, or has ential ficial device e.g., an orthopaedic implant. In particular, one of the ential and ential and ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ential ent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of treating osteoarthritis via the administration of a composition comprising the camptodactyly-arthropathycoxa vara-perioariditis (GACP) protein.

CC COXA vara-perioariditis (GACP) protein.

The composition may further comprise a local anaesthetic. The composition of the invention may be administered via intra-articular or intravenous of the invention may be administered via intra-articular or intravenous injection. The buman CACP protein is identified in the invention as being megakaryocyte stimulating factor (MSF). The gene encoding CACP protein (MSF) is located on chromosome 1q25-31, and mutations in this gene are creponsible for the heritable disorder camptodactyly—arthropathy-coxa vara-perioarditis, in which patients have synovial hyperplasia without evidence of inflammation. CACP protein (MSF) acts as a synovium confidence of inflammation. CACP protein (MSF) acts as a synovium creatment of osteoarthritis (e.g., joint pain, loss of range of movement symptoms of osteoarthritis (e.g., joint pain, loss of range of movement of osteoarthritis (e.g., joint pain, loss of range of movement of ortion damage). The present sequence represents human megakaryocyte crimilating factor (MSF, CACP protein). Note: This sequence is not given contained in its entirety in figure 4 of the specification, although a GenBank contained from

                                                                                                                                         1157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells

                                                                                                                                                                                                                                                                                                                                                                                  131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       251
expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used proliferation; to regulate haematopoissis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or simulation; as anti-inflammatory agents; and in treatment of leukaemias. AA(229510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                                                                                                                                                                                                                                                                                                                                                         09
                                                                                                                                                        The invention relates to a method of determining the angiogenic index of a tissue or cell sample comprising assessing, in a sample, the expression levels of one or more differentially-expressed gene from any of 34 DNA sequences, given in the specification, where the levels are indicative the angiogenic index. The methods and compositions of the present invention are useful for diagnosing preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary arteriosclerosis. They can also be used in research, drug discovery and forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       KEKTTSAKETQSIEKTSAKDLAPTSKVLAKPTPKAETTTKGPALTTPKEPTFTPKEPAS

The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary arteriosclerosis. They can also be used in research, drug discovery and forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   440 PITIKSAPITIKEPAPITIKSAPITPKEPSPITIKEPAPITPKEPAPITPKKPAPITPKK
